PROFILE

Fullstack web developer who has shipped a multi-vendor e-commerce platform with role-based dashboards, seller analytics, and full admin control, alongside client sites, business landing pages, and interactive tools, end to end and largely self-directed. Comfortable across the stack: React/Next.js front ends, Node/Express APIs, and MongoDB data layers, deployed and hosted in production. Currently deepening computer science fundamentals as a Software Engineering student, while continuing to build and ship. Strongest traits: closes the loop between idea and working product, debugs methodically, and gets uncomfortable fast when something is unclear rather than guessing.

EXPERIENCE

Fullstack Web Developer August 2025 – Present

Verbum Networks Limited — Intern

- Built and maintain a multi-vendor e-commerce platform using Next.js, Node.js/Express, and MongoDB, supporting distinct admin and seller roles.
- Designed the seller onboarding and product-management flow, allowing vendors to list products and view sales/performance statistics independently.
- Implemented platform-level admin controls governing seller access, permissions, and overall system integrity.
- Owned the project end to end: architecture decisions, environment setup (Bun, Git Bash on Windows), debugging deployment and configuration issues, and iterative delivery.

SELECTED PROJECTS

Multi-Vendor E-Commerce Platform https://github.com/Olivennaji99/multi-vendor-ecommerce

- Role-based system distinguishing admin and seller permissions, with admins able to approve, manage, and remove sellers.
- Seller-facing analytics dashboard surfacing product performance and customer demand signals.
- Built with Next.js, Node.js, Express, MongoDB.

Personal & Client Portfolio Sites https://olive-portfolio-psi.vercel.app/

- Designed and built a personal portfolio in both static HTML/CSS/JS and a Next.js 16 + Tailwind version, with dark/light mode and animated sections; deployed using Vercel.
- Delivered additional portfolio sites for other clients to a similar production standard.

Business & Organization Websites https://materchristicentre.com/

- Built landing pages and full websites for businesses and churches, giving each a functioning digital presence (information, contact, and online visibility).

Applied JavaScript Tools https://github.com/Olivennaji99/Analog-clock - https://github.com/Olivennaji99/digitalClock

- Built an analog and digital clock and a calculator from scratch to strengthen core DOM, state, and logic fundamentals — deliberately chosen as problem-solving exercises rather than tutorials.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML, CSS

Frontend: React, Next.js, Tailwind CSS

Backend: Node.js, Express.js, REST APIs

Database: MongoDB

Tools & Hosting: Git, GitHub, Vercel, Hostinger

Practices: Debugging, clean code, application architecture, reading documentation

Learning: DevOps fundamentals (self-taught, in progress)

EDUCATION

B.Sc. Software Engineering 2025 – 2029 (in progress)
Miva Open University

Senior Secondary School Certificate
City Girls Secondary school *2024 -2025*

CERTIFICATIONS

- Soft Skills Certification — Jobberman
- Mobile App Development (Beginner) — SimpliLearn

HOW I WORK

- Continuous learner: actively expanding into software development and broader systems knowledge while shipping production work.
- Action-oriented: builds first to test understanding, then refines — most projects above were self-initiated, not assigned.
- Communicates in writing and in person about technical tradeoffs, not just outcomes.
- Curious by default: reads documentation before asking, and treats debugging as the interesting part of the job.
